

V4 Development Plan: Hazelwood Run Sheet Format

Prepared for: Chad
Date: May 9, 2026
Status: For Review & Approval

Objective

Return the output layout and flow to the familiar Hazelwood run sheet format while retaining the smart extraction functions from V2. The goal is to reduce client review errors by matching the visual structure they already know and trust.

1. Report Structure

The final report will follow this exact section order:

1. Order Information (Page 1 header with new logo)
2. Chain of Title (Numbered entries 1, 2, 3...)
3. Mortgages / Deeds of Trust (Including assignments)
4. Judgments / Liens
5. Miscellaneous Documents
6. Legal Description (Vesting deed only)
7. Additional Information (Outsale, easement, utility ROW, C&R, lease)
8. Names Searched (Footer — mandatory)

2. Key Changes from Current V2/V3

- Typography: Times-Roman, Times-Bold, Times-Italic (PDFKit native)
- Header: Page 1 only with docs/logo/HazelwoodLogoFinal.png
- Order Number: Extract from PDF filename exactly — no dropped digits
- Parcel ID: Never drop leading zeros; stack multiples vertically
- Township: Default to City from property address
- Tax: No two-installment limit; capture all installments; delinquent is numeric
- Chain of Title: Numbered entries, Deed Type FIRST, simplified titles
- Marital Logic: Husband & Wife !' ampersand; otherwise commas
- Consideration: From deed itself only — numeric or LOVE AND AFFECTION
- In/Out Sale: Checkbox format (Yes/No)
- Notes: Only for special situations (will, life estate, divorce, etc.)
- Names Searched: Borrower first, all grantors/grantees, all heirs
- Empty Categories: Standard statements when no data exists

3. Page Break Options

Option A: Continuous Flow (Current Behavior)

Sections flow naturally. PDFKit handles page breaks automatically. Sections may split across pages mid-entry.

Pros: More compact, familiar, no wasted whitespace

Cons: Sections can split awkwardly, harder to skim

Option B: Section Page Breaks (RECOMMENDED)

Each major section starts on a new page. Chain entries never split across pages.

Pros: Clean professional appearance, easy to skim, print-friendly, industry standard

Cons: More pages, some whitespace, slightly more complex logic

4. Files to Modify

- backend/src/services/googleAiService.js — Update AI prompt/schema
- backend/src/services/pdfGenerator.js — Rebuild with Hazelwood layout, Times font, section breaks
- backend/src/services/docxGenerator.js — Match PDF structure
- backend/src/services/markdownGenerator.js — Match PDF structure
- .gitignore — Add v4/ directory exclusion

5. Implementation Timeline

- Phase 1: Update AI prompt/schema in googleAiService.js — 2-3 hours
- Phase 2: Rebuild pdfGenerator.js with Hazelwood layout, Times font, section breaks — 3-4 hours
- Phase 3: Update docxGenerator.js to match PDF structure — 2-3 hours
- Phase 4: Update markdownGenerator.js to match PDF structure — 1-2 hours
- Phase 5: Update .gitignore and test end-to-end — 1 hour
- Total: 9-13 hours

6. Open Questions for Chad

1. Page Breaks: Option A (Continuous Flow) or Option B (Section Page Breaks)? Recommendation is Option B.
2. Deed Title List: Should we add any other deed types now, or keep it open to expand later?

7. Approval Checklist

- & Report structure and section order
- & Font choice (Times-Roman family)
- & Page break approach (Option A or B)
- & Chain of title formatting rules
- & Tax information handling
- & Names searched logic
- & Empty category statements

Once approved, development will begin immediately.
